

TIMBERLINE TBL1000

# TREE SHEAR

**SUPER DURABLE**

- Fastest cycle time available
- Made from **5/8" High Tensile Steel plate**
- All major pivot points are **machined & greaseable** for longer life.
- Standard **quick attach coupler or pin on couplers** for skid steers, tractors, telehandlers, backhoes, wheeled loaders & compact excavators
- Hydraulic Pressure required is 2400 PSI or greater for best results
- Weight - 560 lbs.
- Single blade design allows for predictability of falling trees. Trees almost always fall the direction of the blade's travel.
- Narrow shear gets into tight spaces
- Escape proof lower jaw serration allows for 100% of your machine's power to be applied to the shear.
- Single 1" blade eliminates complicated adjustments and sharpening.
- HT model rotates with the flick of a switch from the safety of your equipment's cab.
- No complicated clamping systems to struggle with.

## THE TIMBERLINE TBL1000 TREE SHEAR MAKES IT EASY!

- Vegetation removed with little or no disturbance to the ground,
- Reach over fences and other obstacles to cut off branches
- Limitless applications in the timber/logging, reclamation, residential development, farming or any job requiring timber or brush removal
- Same day shipping - Nationwide

TILT**

**TIMBERLINE TBL 1000**

**Operates with  
EXISTING  
HYDRAULICS**

**TREE  
SHEAR**

**Smaller size but just  
as Tough and Quality Built  
as it's Big Brothers!**

- 10" capacity in one cut
- Rotates 110° to cut and move felled trees
- Cut at ground level or reach high to trim branches
- Narrower shear gets into tight spaces
- Limitless applications in the timber/logging, pasture reclamation, residential development, farming/ranch, or any other job that may require timber or brush removal.
